

TMOST

Tiger Mower Operator Safety Training

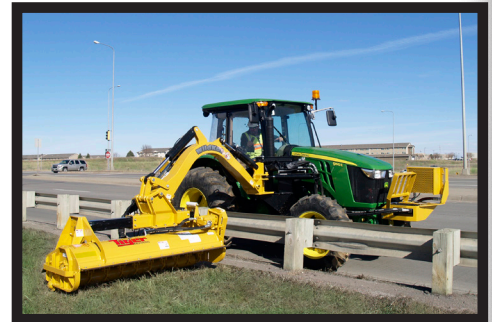

In 1968, Tiger Corporation began development, design and perfecting a hydraulically powered rotary cutter for industrial mowing applications. Tiger's patented mowers have been the inspiration for dozens of new products designed to improve and enhance the tools available for controlling all types of vegetation. Now in the 21st century, Tiger continues to excel within the industry by providing the TMOST program, Tiger Mower Operator Safety Training.

The TIGER TMOST is the only training course of its kind for industrial mowing equipment. Based upon the extensive operations guidelines created by the AEM (Association of Equipment Manufacturers), it encompasses a full range of safety procedures for today's operators.

Conducted at your location by a Certified Safety Trainer, each student receives a training workbook and safety package that includes: Work gloves, Safety glasses, Ear plugs, Water bottle and a Safety ball cap. Lunch is also provided for the attendees.

This interactive, hands-on training will provide the following topics to the attendees:

- Becoming A Responsible Operator
- Safely Managing Hazards and Risks
- Pre-Operations Safety
- Operations Safety
- Equipment Shutdown Safety
- Maintenance Safety Practices
- Equipment Walk-Arounds and Pre-Operation Safety Inspection
- Safety Mounting and Removing Equipment To and From Your Tractor
- Using Personal Protective Equipment (PPE)
- Drivers Performance Test

***Providing Innovative Solutions
to Control Tough Vegetation***

For Operators of Industrial & Agricultural Mowers and Tractors

It's one thing to teach safety, it's another to make sure it has been learned. The TIGER TMOST Safety Program measures the quality of what is learned through pre- and post course testing. In only one day, your operators will receive both classroom and hands-on instruction.

A Best Safety Practices Training Program applies to all TIGER mowing products and all makes and models of tractors. This training program will require 7 hours to complete.

The Training Program Overview

Course Introduction

Pre-Test

Self Assessment

Being a Responsible Operator

Safety Management of Hazards & Risks Following a Safety Program

Before Operations Safety

During Operations Safety

Safety Practices During Shutdown

Safety During Maintenance

Post Test

Using Mower/Tractor Safety Checklists

Hands-on Safety Training/Drivers Testing Course

Final Written Examination

CORPORATION

All training is done by both an OSHA authorized and National Association of Safety Professionals (NASP) certified Safety Training/ Planning Specialist. Sign Up for the next TMOST Training Class:
