Features

The Tiger Bengal Series boom mower offers exceptional versatility, designed to attach seamlessly to a wide variety of wheel loaders. To ensure proper operation, the wheel loader must have a minimum operating weight of 26,000 lbs. Call dealer or Tiger to confirm compatibility with your loader. Offering both left and right-side operation, the boom mower is equipped with its own independent auxiliary engine, providing the power necessary for even the toughest cutting tasks. Engineered for maximum efficiency in all types of vegetation, it allows operators to tackle all mowing jobs with ease.

Simply add the mating half of the loader's Quik-Attach system and easily go from bucket work to a boom mower in minutes.

Available in Left Side or Right Side models.
